K-State Biomedical, Electrical and Computer Engineering

Instructions for completing the long-range planning sheet

> This is just one way for students to go about creating a long-range academic plan.
> Use the system that works best for you!

How to get started:

- Using DARS, mark off the courses you have completed on your degree map (formerly flowchart).
- Develop a plan for success by organizing your remaining courses semester by semester, listing them on the long-range planning sheet.
  - Determine your ideal course load by factoring the total number of credit hours feasible in a semester, the combination of courses you'll take, extracurricular activities, and any other time commitments.

Be sure to take into account:

- Several classes are only offered in the fall or the spring semester.
  - It can be helpful to use the Course Catalog to view basic course details, prerequisites, and the semester when courses are typically offered.
- Prerequisites are shown on the degree maps or in the Course Catalog. Plan accordingly to make sure you have the appropriate prerequisites completed before the course that requires them.
- Specific technical electives and/or emphasis area courses you plan to take, along with the semester you would take them.

> Note that this plan may change due to scheduling and course offerings, but it will give students a good idea of how long it may take complete curriculum requirements and help identify which semester may be most helpful to take certain courses.
